AI Analysis Summary

You've demonstrated strong use of semantic elements like `<main>`, headings, and lists, which helps structure your content clearly. To take it further, consider replacing generic `<div>` wrappers with semantic sectioning elements and adding meaningful alt text to images to improve clarity and user experience.

Priority recommendations:

- 1 Replace the `<div id="sign-up">` with a `<section>` element to better represent a standalone content block.
- 2 Use a `<section>` or `<aside>` for the success message container instead of a generic `<div>` to clarify its role.
- 3 Add descriptive alt text to the illustration image inside the `<picture>` element to convey its meaning to screen reader users.

<button> is missing required "type" attribute

```
<button id="successBtn" class="btn btn-success">Dismiss message</button>
```

LEARN HOW TO FIX THIS ISSUE

WARNING **Structure & Semantics** **AI Detected** 1 occurrence

The `<div id="sign-up">` wraps the entire sign-up form and related content instead of using a more semantic sectioning element like `<section>`. This reduces the clarity of the document structure and makes it harder for users and search engines to understand the content grouping.

```

<div id="sign-up" class="wrapper show">
  <picture>
    <source media="(min-width: 58.75rem)" srcset="assets/images/illustration-sign-up-desktop.s
    
  </picture>
  <div class="wrapper__text-form">
    <div class="text">
      <h1 class="heading">Stay updated!</h1>
      <p class="paragraph main-p">
        Join 60,000+ product managers receiving monthly updates on:
      </p>
      <ul class="list">
        <li class="paragraph">
          <span class="icon-list"></span>Product discovery and building
          what matters
        </li>
        <li class="paragraph">
          <span class="icon-list"></span>Measuring to ensure updates are a
          success
        </li>
        <li class="paragraph">
          <span class="icon-list"></span>And much more!
        </li>
      </ul>
    </div>
    <form novalidate="" id="form" class="form">
      <div class="label-error">
        <label class="label" for="email">Email address</label>
        <span aria-live="polite" id="error-message"></span>
      </div>
      <input class="email-input" type="email" name="email" id="email" autocomplete="on" plac
      <button type="submit" id="btn" class="btn paragraph">
        Subscribe to monthly newsletter
      </button>
    </form>
  </div>
</div>

```

LEARN HOW TO FIX THIS ISSUE

WARNING **Structure & Semantics** **AI Detected** 1 occurrence

The success message container uses a `<div id="success-msg">` instead of a semantic sectioning element like `<section>` or `<aside>`. This makes it less clear that this is a distinct content block related to the form's success state, which can confuse users and assistive technologies.

```
<div id="success-msg" class="success-msg hidden">
  
  <h2 class="heading heading-success">Thanks for subscribing!</h2>
  <p class="paragraph">
    A confirmation email has been sent to
    <span id="email-span" class="email-span"></span>. Please open it and
    click the button inside to confirm your subscription.
  </p>
  <button id="successBtn" class="btn btn-success">Dismiss message</button>
</div>
```

LEARN HOW TO FIX THIS ISSUE

WARNING **Structure & Semantics** **AI Detected** 1 occurrence

The `<img>` inside the `<picture>` element has an empty `alt` attribute. While decorative images can have empty alt text, this image appears to be an illustration related to the sign-up form and should have descriptive alt text to convey meaning to users who rely on screen readers.

```
<picture>
  <source media="(min-width: 58.75rem)" srcset="assets/images/illustration-sign-up-desktop.svg">
  
</picture>
```

Strengths 5

Structure & Semantics

Uses semantic `<main>` element to wrap the primary content, helping define the main content area clearly.

Structure & Semantics

Proper use of heading levels with `<h1>` for the main heading and `<h2>` for the success message heading, maintaining a logical content hierarchy.

Structure & Semantics

The form uses a `<label>` correctly associated with the email input via `for` and `id` attributes, improving form semantics and usability.

Structure & Semantics

The list of newsletter topics is marked up as a semantic unordered list `<ul>` with list items `<li>`, correctly representing related items.

Structure & Semantics

The `<picture>` element is used effectively for responsive images, providing different sources based on screen size without JavaScript.
